

LIQUID CARNITINE-PLUS

Carnitine-PLUS provides L-Carnitine and Carnitine Orotate in a liquid form for maximum absorption and utilization

Why Take L-Carnitine with R-lipoic Acid?

- ✦ Carnitine and R-Lipoic Acid (RLA) complement one another in the production of energy and detoxification.
- ✦ The combination of Carnitine and RLA are active at lower doses than either one alone.
- ✦ Carnitine's role is to transport fatty acids into the mitochondria for energy production.
- ✦ Carnitine and RLA promote optimum metabolic activity and cell function, and reduce the levels of free radicals.
- ✦ Carnitine and RLA play a key role in glucose metabolism and enhance the sensitivity of insulin receptors.
- ✦ Carnitine works synergistically with RLA to help repair mitochondria and enhance anti-oxidative protection.
- ✦ Carnitine and RLA may assist in reducing inflammation naturally.
- ✦ Carnitine and RLA restore the activity of key enzymes.
- ✦ Orotic Acid is a natural substance, functioning as an essential component of living cells and has a direct effect on folate metabolism necessary for DNA synthesis. L-carnitine orotate promotes the reproduction of liver cells and the normalization of liver enzyme systems, and prevents impaired liver cells from deterioration.

Serving Size: 1 teaspoon

Product Contains: L-carnitine & Carnitine Orotate 880 mg

Other Ingredients: Purified water, vegetable glycerin, natural flavor

Recommended Use: Take 1 teaspoon or more daily between meals or as directed by your health care provider.

LIQUID CARNITINE-PLUS can also be taken 30 minutes before training.

72 servings
